EXHIBIT

1. (Currently Amended) A system for providing PBX-integrated unified messaging services on a wide-area network, comprising:

one or more a corporate communication platforms, each of said one or more corporate

communication platforms coupled to a switched backbone, integrated with a PBX via a

PBX interface, and comprising a slave message mailbox cache; and

a plurality of system communication platforms coupled to said switched backbone, wherein

one such system communication platform comprises a master message mailbox,

wherein said slave message mailbox cache is bi-directionally synchronized in real-time

with said master message mailbox such that all changes to said slave message mailbox

are reported immediately to said one such system communication platform, ~~and at least~~

~~some~~ changes to all messages in said master message mailbox that are associated with

said corporate communication platform are reported immediately to the corporate

communication platform comprising said slave message mailbox cache, and changes to

all messages in said master message mailbox that are not associated with said corporate

communication platform are not reported to the corporate communication platform

comprising said slave message mailbox cache, each of said one or more corporate

communication platforms assigned to one of said plurality of system communication

platforms, each of said plurality of system communication platforms assigned to zero or

more of said one or more corporate communication platforms.
